

# HOW ARE HF & CKD RELATED?

In patients with HF, declining kidney function is one of the strongest predictors of mortality and worsening outcomes

~55%

of patients with HF have CKD

>2x

higher all-cause mortality rates  
vs in those without CKD

UP TO  
~40%

higher risk of hHF in patients  
with eGFR 30-59

EARLY INTERVENTION  
IS CRITICAL

# HOW ARE HF & CKD RELATED?

In patients with HF, declining kidney function is one of the strongest predictors of mortality and worsening outcomes

**~55% of patients** with HF have CKD

**>2x higher all-cause mortality** rates vs in those without CKD

**Up to ~40% higher risk of hHF** in patients with eGFR 30-59

**Declining kidney function** is one of the strongest predictors of mortality and worsening outcomes

**EARLY INTERVENTION  
IS CRITICAL**

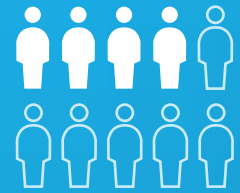

# HOW ARE HF & CKD RELATED

In patients with HF, Declining kidney function is one of the strongest predictors of mortality and worsening outcomes

**30%**  
of patients with  
HF have CKD

**20%**  
higher all-cause  
mortality rates vs in  
those without CKD

**20%**  
higher risk of hHF  
in patients with  
eGFR 30-59

**20%**  
Declining kidney function  
is one of the strongest  
predictors of mortality and  
worsening outcomes

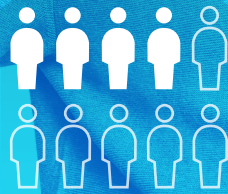

**EARLY INTERVENTION IS CRITICAL**
